

The Spine of the World

13 0 2

Chapter 1 by Brian Parisi

In the distant future of x276, space travel and teleportation has no longer been a dream by the people of Earth, as it was the most common form of long range travel. Along with this, the entire Milky Way galaxy has nearly been explored to its fullest, with the exception of a quarantined sector. No sentient life forms have been found, however, flora and microbes on other planets are collected and studied by curious scientists.

But the United Human Federation had one problem: Earth, the homeworld of all trade and most humans, is dying. After so many millenniums of mining and draining resources, the Earth was dying. Scientists had come up with a solution though: The Spine of the World. It is the backbone of Earth after the crusts have become unstable, and it controls the remaining heat of the Earth's Core. One problem remains though: For the Spine to work, one major Continental Plate has to be removed. And this made people angry and violent.
